REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

It was noted in the previous Reasons for Allowance that the prior art fails to teach or suggest forming the cold-formed area in the end of the bar such that it extends beyond the threads of the bar. The newly cited PCT reference (WO 00/47349) shows this feature in Figure 1 of the drawings. Note that roller 10 is used to cold-form the end of a steel bar 4, with the result being a bar having a threaded portion 12, a cylindrical, non-threaded portion 16, and a tapered, non-threaded portion 15. Clearly, the entire end of the bar (from the larger diameter end of tapered portion 15 to the end 23 of threaded portion 12) is cold-formed, and the cold-formed area extends beyond the threads of the bar. This is reiterated on page 2 (lines 27-29) of the disclosure. However, the language in applicant's claims is limited to the particular sequence of steps in which the end of the bar is first radially cold-formed, and then the threads are formed (in only a portion of the cold-formed region). In the PCT reference, the end is cold-formed and threaded simultaneously (see the disclosure at page 4, lines 12-14), thus teaching *away* from applicant's claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
